

# V — Validation (Jokers/OMPS)

## Core 4

- Joker glue.
- OMPS gates.
- Global checks.
- Termination tokens.

## Extended Roles

- Red/black Jokers = dual root validators.
- OMPS = outward mirrored parity set = closure operator.
- 1!!1 = superposition marker (dual root).
- External decks = witness validators.

## Super-State Closure

- If contradictions exist, Joker-type validators must exist — else system collapses.
