

N — Networks

Core 4

- 4×4 grids.
- 24 rings.
- Lattice embedding.
- CRT overlap.

Extended Roles

- Toroidal spirals: ϕ -based embeddings.
- E8/Leech lattices: dense packing inevitability.
- Golay/Conway codes: error-correction as geometric law.
- Language networks: words = multidimensional lattice points.

Super-State Closure

- If local grids exist, global lattices exist in projection — not optional.
