

Publication Center v0: GAE/CEC Contracts & Governance Export

Two-Layer Contracts

GAE (JSON+JWS): provenance & NGD; CEC (CBOR+COSE): execution & gates. Different keychains; explicit linkage via `ngd_sha256` ↔ `cec_b3`.

NTER Loop

If real-world evidence is required (`pressure_gpa`, `atm_density`), LD emits NTER; article is PROVISIONAL until pins are attached. Governance will refuse OPEN without pins.

Sample Export

This packet includes a governance manifest that summarizes arm states, witness outcomes, pins, and verdict for each exemplar case in the pilot.
